

folding fingers

origami creates the world

from a small six inch square

exquisite patterns on moldable paper

pieces prowl into life as animals

they fly from the hand as birds

origami creates the world

hard paper, soft paper, foil paper

all produce unique flashes of reality

exquisite patterns on moldable paper

nimble fingers fold and crease

so the squares become shape shifters

origami creates the world

models have a short lifespan

paper gives up its ghost quickly

exquisite patterns on moldable paper

so fingers keep creating anew

pulling fresh forms from single squares

origami creates the world
